TotalRecall in action. Click to embiggen.

Overview

Penn TotalRecall is designed for precise scoring and timing of participant responses during verbal tasks, especially Free Recall. However, it can be used for many kinds of audio annotation. TotalRecall displays an audio recording as a self-scrolling waveform that automatically keeps up with audio playback.

TotalRecall is used on a daily basis by many in the Computational Memory Lab. Support and maintenance will continue indefinitely with new features being added as needed.

Download

Operating System	Type
Mac OSX (http://memory.psych.upenn.edu/files/software/TotalRecall/downloads/stable/PTR.app.tar.gz)	Mac OSX App
Linux (http://memory.psych.upenn.edu/files/software/TotalRecall/downloads/stable/PennTotalRecall.deb)	Debian Package
Windows (http://memory.psych.upenn.edu/files/software/TotalRecall/downloads/stable/PennTotalRecall_Setup.exe)	Windows Installer
Source Code (http://github.com/memlab/Penn-TotalRecall)	

Getting started

Download the file for your platform.

Install:

- Mac: Unzip PTR.app.tar.gz. This should automatically happen when you click it in your downloads. Then move PTR.app into the Applications folder.
  - See below for special Gatekeeper issues.
- Linux: Double click the .deb file and click Install Package.
- Windows: Double click the .exe file and follow the instructions.

Now try running the program:

- Mac: search for Penn TotalRecall in Spotlight, or double click PennTotalRecall.app in Finder by going to the Applications folder.
- Linux: on Ubuntu you can find Penn TotalRecall in the Applications --> Accessories menu.
- Windows: you can find Penn TotalRecall in the start menu as usual. There should also be an icon on your desktop.

Try opening the wave file provided in this samples folder (http://memory.psych.upenn.edu/files/software/TotalRecall/downloads/stable/sample.zip).

Check the menu items for actions and keybindings available to the user. Also check Help --> Key Bindings.

10.7 (Lion) and later [Expand]

Video tutorials and written annotation guide

Our full guide to annotation and video tutorials explain proper use of TotalRecall, along with our internal annotation methods.

System requirements

TotalRecall currently runs on Mac OSX, Linux and Windows. We plan to test and support these configurations, but the program may work on others.

TotalRecall requires a Java Runtime Environment, version 5 or higher. Most computers come with Java pre-installed, so you can probably download and run the program without worrying about system requirements. If it turns out you don't have Java, you can download it free here (http://www.java.com/getjava/).

Support, contact, and bug reports

Please feel free to contact us at: memory - software @ psych . upenn . edu (remove all the spaces).

Thank you for taking the time to improve Penn TotalRecall!

Data analysis

We also provide our Behavioral Toolbox, a collection of MATLAB functions useful for analyzing the output of TotalRecall.

Development

Please visit our development page.

For developers, please also visit our TotalRecall/Build page.
